

Harish — Career & Wealth Deep-Dive

A Reading in the Korean Four Pillars Tradition

For Harish
Born 4 June 1992, 03:10 AM IST (Pallipattu, Tamil Nadu)
Day Master Sin (Yin Metal)

Grounded in the Five Elements and Yin-Yang philosophy. Interpreted
through classical Myeongri (Korean Saju) tradition: Jeokcheon-su,
Yeonhae-japyeong, Gungdong-bogam, Myeongri-jeongjong.

Generated October 01, 2026 · Report ID: CID-career-20261001

CosmicSaju · cosmicsaju.com

> Topic file. The base natal reading is at harish-report.md. This file is a full standalone career deep-dive — domains, roles, business fit, investment behavior, and transition timing — grounded in, and. It goes beyond the base report's own Career & Wealth section rather than repeating it.

2026-09-25 — Full career & business deep-dive (regenerated)

Pillars: Im Shin (year) / Eul Sa (month) / Sin Hae (day) / Gi Chuk (hour). Day Master Sin (Yin Metal, Sin Metal), Balanced (climate climate-resolved: this chart peaks in hot summer conditions, so the classical remedy is Water). Favorable Element = Water, Supporting Element = Metal. Chart Structure: Direct Officer Structure (Direct Officer structure, Direct Officer Grid). Element balance: Metal 27.8%, Water 25.3%, Earth 22.8%, Wood 16.5%, Fire 7.6% (corrected 2026-09-26 — the Chuk hidden-stem order fix swapped Metal and Water; see the dated note at the end).

> Hour-boundary note (inherited from the base report): the corrected solar time for this chart lands only ~29 seconds from the Chuk/In branch boundary — the base report's own "⚠ Hour-boundary note" flags Gyeong In as a plausible alternate hour pillar alongside the primary Gi Chuk. Recomputing the full ten-god tally for that alternate hour (Gyeong stem → Rob Wealth (Companion); In's hidden stems Gap/Bing/Mu → Direct Wealth/Direct Officer (Authority)/Direct Resource) gives Resource 3, Companion 4 (incl. the Day Master), Output 3, Wealth 3, Authority 2 — Resource and Output each lose the hit they were drawing from Chuk (Indirect Resource and Eating God (Output) respectively), and Wealth and Authority each gain one. The three-way Resource/Companion/Output tie described below softens toward Companion alone under the alternate hour; the Water/Metal-lever domain and business conclusions below do not depend on which of the two hours is correct, but the specific ten-god-driven framing in this section would shift.

Ten-God Profile (foundation for everything below)

Class	Stems present	Count
Resource: Direct Resource/Indirect Resource	hidden Mu (year residual, month residual), Gi/hour, visible stem + hidden main	4
Companion: Pillar (Companion)/Rob Wealth (Companion)	Sin (day, self), hidden Gyeong (year main, Rob Wealth (Companion)), hidden Gyeong (month middle, Rob Wealth (Companion)), Sin (hour residual, Pillar (Companion))	3 (+ self)
Output: Eating God (Output)/Hurting Officer (Output)	Im/year, visible, hidden Im (year middle, Hurting Officer (Output)), hidden Im (day main, Hurting Officer (Output)), Gye/hour middle	4
Wealth: Direct Wealth/Indirect Wealth	Eul/month, visible, hidden Gap (day middle, Direct Wealth)	2
Authority: Direct Officer (Authority)/Seven Killings (Authority)	hidden Bing (month main, Direct Officer (Authority))	1

A genuine three-way tie at the top: Resource, Output, and Companion are all at 4 (cross-checked against `prose_fillers.py::_grouped_dominant_classes`, the engine's own class-level tally — an earlier draft of this table under-counted Output at 3 by missing the hidden Im in Shin's middle position; corrected here). Authority — despite naming the Direct Officer Structure grid — is the thinnest class in the chart (1, hidden only). This is worth reading precisely: Direct Officer Structure names the structural grid (the month branch Sa's main qi

hidden stem Bing is Direct Officer (Authority) relative to Sin), it does not describe the chart's dominant working mode. With Resource, Output, and Companion equally weighted, the working mode this chart actually runs on is broad rather than single-threaded — research and credentialed depth (Resource), knowledge converted into delivered output, and peer-level, self-directed effort (Companion) — carried out inside or alongside a structure, rather than the pure institutional-authority/management mode the grid label alone might suggest. Every domain and role recommendation below follows from that distinction.

Suitable Career Domains — Ranked

Per 's Favorable Element-first rule ("align work with what the chart needs — Favorable Element/Supporting Element — not merely the Day Master's own element"), domains are ranked by how directly they draw on Water (Favorable Element) and Metal (Supporting Element), cross-checked against the Resource/Output-led ten-god mode above.

Rank	Domain	Element	Why it fits this specific chart
1	Strategy & Management Consulting	Water (Favorable Element)	Pairs Water's connective, flowing character with the chart's genuine Resource-class depth and its real Output channel (Im Hurting Officer (Output), Gye Eating God (Output)) — accumulated knowledge converted into a delivered, paid recommendation. The single cleanest match to both the element need and the ten-god mode.
2	Investigative & Analytical Journalism / Publishing	Water (Favorable Element)	The output-feeds-wealth chain (Output feeds Wealth, detailed below) runs directly through writing and publishing; Water's information-carrying, below-the-surface quality matches investigative work specifically, not media in general.
3	Diplomacy, International Trade & Cross-Border Advisory	Water (Favorable Element)	places diplomacy and international trade under Water; the chart's thin-but-present Wealth (Indirect Wealth in the month — opportunity-shaped wealth) suits work that connects across networks and jurisdictions over one fixed institutional seat.
4	Law, Compliance & Regulatory Practice	Metal (Supporting Element)	Metal's precision, boundary-setting, and judgment is the Day Master's own native register; pairs naturally with the chart's single hidden Bing Direct Officer (Authority) to lend credible institutional standing without needing a management-heavy role.

Rank	Domain	Element	Why it fits this specific chart
5	Engineering, Technical Infrastructure & Quality/Audit	Metal (Supporting Element)	Same native-Metal register as #4, but more individually executed and less client-facing — fits the Resource-led preference for depth over constant negotiation.
6	Curation, Research Institutions & Arts Advisory	Water (Favorable Element)	A lower-visibility Water domain; suits the chart's Resource-led temperament when scholarship-adjacent work is preferred over client-facing consulting.
7	Finance, Investment & Trading (analytical, not sales-led)	Metal (Supporting Element)	Metal-native, but ranked here rather than higher because the chart's Wealth is thin (2 stars, one hidden) — the analysis side of finance fits better than the deal-flow/sales side, which would call for more Wealth than the chart carries.

Workable but not primary: Earth-aligned fields (real estate, operations, insurance) — Earth is present (22.8%) but is the it restrains the Water Favorable Element, so it's workable terrain rather than a lever — the wet Gi/Chuk earth in this chart does support the Day Master, the dry kind less so. Secondary at most: Fire-heavy fields (pure performance, hospitality front-of-house, high-visibility entertainment) — Fire is this chart's unfavorable element: its count is the lightest (7.6%), but the chart was born in the peak-Fire Sa month, so Fire is the overheating force the Water Favorable Element exists to cool, not a shortage to fill. A primary career built on Fire-dominant work leans into the imbalance rather than correcting it.

Suitable Job / Employment Roles

Concrete role-level suggestions, mapped to the ranked domains above:

- Strategy consultant / management advisor (independent or firm-based) — the single best-fit role; converts research depth into delivered analysis for a fee.
- Policy analyst or regulatory advisor — draws on the thin-but-real Authority without requiring the querent to be the institution's manager.
- Investigative reporter, analyst-journalist, or research editor — a direct output-feeds-wealth role (see below).
- International trade advisor, cross-border deal advisor, or diplomatic-track civil servant — matches Water's network-connecting quality.
- Compliance officer, regulatory counsel, or audit lead — Metal-native and credential-anchored, matching the single Authority without over-reaching into people-management.
- Technical infrastructure lead / systems architect (engineering-adjacent, individually executed) — Metal-native.
- Investment or credit analyst (research-and-recommendation, not sales/origination) — matches Metal plus thin Wealth.
- Independent researcher, think-tank fellow, or curator — the lower-visibility Water option for a more scholarship-oriented temperament.

Business Domain Fit

Per 's output-feeds-wealth (food hurt life wealth, "Output feeds Wealth") chain check:

- Output is present and real (Im Hurting Officer (Output) in the year stem, Gye Eating God (Output) hidden in the hour) — a genuine output channel: writing, analysis, teaching, or built-product work.
- Wealth is present but thin (Eul Indirect Wealth visible in the month, Gap Direct Wealth hidden in the day) — enough for the chain to run (the base report's own "Income Rhythm" already reads this correctly as steady, rarely windfall-driven), but not enough to support a high-capital, deal-volume-driven business model.
- The chain runs: output-based income is structurally supported. Per, this reads as favorable for entrepreneurial types, conditional on the Day Master being strong enough to sustain the output — Harish's Balanced (not weak) reading supports it.
- Wealth funds status is only lightly formed: with Authority thin (1, hidden), converting earnings into institutional rank is a secondary story, not the chart's main engine.

What kind of business, specifically:

- Best fit: a solo or small-team advisory/consulting practice — a credentialed independent practice (strategy, policy, compliance, or analytical-research consulting) built around the querent's own expertise, monetized through delivered analysis or advisory retainers rather than a scaled product business.
- Product vs. service: service-and-expertise-led, not product-manufacturing-led — the chart's Metal is native precision and judgment, not Earth-native asset-building or Fire-native brand-building.
- Institutional-backed vs. fully independent: a hybrid path fits best — build credibility inside an institution or established firm first (the single Authority gives a real, if modest, institutional-authority thread to draw on), then move to independent practice once the output-feeds-wealth channel (a body of published work, a track record of delivered analysis) is established. This matches 's Employment vs. Entrepreneurship signal for a chart whose Authority is thin but present: institutional credibility first, independence second — not simultaneously.
- Partnership structure: Companion is present (3, all hidden except the day-pillar self, no visible Rob Wealth (Companion)) but not dominant. Per 's peer-drains-wealth pattern, this is a mild, not acute, partnership-risk signal. A sole practice or one clearly-defined co-founder with a written operating agreement is safer than a loosely-structured multi-partner firm, but the chart does not show the pronounced peer-competition risk some charts carry — partnership itself is not contraindicated, only undefined partnership.

Investment Patterns & Wealth Behavior

Per and \$Wealth Preservation:

- Income style — mixed, Direct Wealth-leaning: the chart carries both Indirect Wealth, Eul in the month — deal-shaped, opportunity-driven and Direct Wealth, hidden Gap in the day — steady, earned. With only 2 Wealth stars total and one hidden, the dominant pattern is closer to Direct Wealth: steady, incremental income from a defined book of work (retainers, salary, or a stable client base) rather than large opportunistic windfalls. The single visible Indirect Wealth star means occasional deal-shaped upside is real but should be treated as a bonus, not the primary income model.

- Risk tolerance: moderate-low. A Balanced Day Master with thin Wealth does not have the carrying capacity for high-variance, high-leverage bets that a strong Day Master with abundant Wealth would — per 's carrying-capacity test, the chart benefits more from consistency than concentration.
- How wealth should be held: diversify moderately; favor custodianship aligned with Water and Metal (their industries, directions, and rhythms) per. Avoid concentrating savings or investments in Fire-heavy vehicles (Fire is the chart's Unfavorable Element) or in ventures whose returns depend on rapid, high-visibility scaling.
- storehouse check: the four wealth storehouse (wealth-storehouse) branches are Jin Sul Chuk Mi. Harish's chart has Chuk in the hour branch — a storehouse branch, but the element it stores here is not specifically the Wealth element (Wood, for a Metal Day Master). No Wealth-in-storehouse pattern applies; wealth in this chart circulates via the output-feeds-wealth chain rather than accumulating-and-releasing from a storehouse. (If the alternate hour pillar Gyeong In applies per the boundary note above, this storehouse reading would not apply at all — In is not one of the four wealth storehouse branches. Direct Wealth would still be hidden rather than visible — its carrier moves from Gap hidden in the day branch Hae to Gap as In's main hidden stem, a stronger hidden position, but the hour stem itself, Gyeong, is a Companion-class peer, not Direct Wealth.)
- Rob Wealth (Companion) caution on shared money: as above, keep separate accounts and written terms for any shared venture or investment — the mild Companion presence means this is prudent practice, not an acute red flag.

Career Transition Timing

This is the piece a topic-level ten-god analysis alone misses: when, not just what. Read against the base report's own Major Luck and 10-Year Forecast tables, using this chart's resolved Water.

The decade-level picture

Decade	Pillar	Lean	What this means for a transition
20–29	Mu Shin	favorable	(past) — resource/mentorship-building decade
30–39 (current)	Gi Yu	favorable	Consolidate, and keep building. This decade's ten-god (Indirect Resource, Indirect Resource) over a Metal branch (Supporting Element, directly supportive) rewards deepening expertise and credentials. Structurally it is stronger than the ten-god name suggests: the decade branch Yu completes the Sa Yu Chuk Metal three-harmony with the natal Sa and Chuk, and Yu is the Day Master's Strong / Earning root — the real reason this is a genuinely favorable window for building the track record the 50s will monetize.

Decade	Pillar	Lean	What this means for a transition
40-49	Gyeong Sul	favorable	Continued build-and-rise energy, with two cautions: the decade stem Gyeong (Rob Wealth, Robber) forms Eul Gyeong combination with the natal month-stem Indirect Wealth Eul (the wealth star is tied up — keep shared money and partnerships on explicit terms, per the Rob Wealth (Companion) caution above), and the branch Sul punishes the natal Chuk. Favorable, but not a coast.
50-59	Sin Hae	favorable	Hae is a Water-dominant branch (main qi Im; also holds a middle qi Gap, per) carrying the Favorable Element, and the stem Sin mirrors the Day Master itself (Pillar, Companion) — a decade of self-defined, peer-level work. One of the chart's strongest windows for launching or scaling an independent Water-aligned practice.
60-69	Im Ja	favorable	A second consecutive Water decade (Im stem, Ja branch both Water) — a natural window for a late-career capstone: publishing, senior advisory work, or institution-building from the platform built in the 50s.
70-79	Gye Chuk	favorable	Gye stem is itself Water (Favorable Element), sustaining the favorable run into the final tracked decade — a calmer, consolidating extension of the 50s-60s momentum rather than a new launch window.

The core timing insight: every decade from 20 onward reads as favorable-lean in this chart (the engine's Direct Officer Structure-anchored favorable-lean labels track resolved Favorable Element/Supporting Element support, and Metal/Water dominate the pillar sequence from the 20s onward) — this is not a "wait for one narrow window" chart. That said, the character of the favorable support differs: the 30s-40s carry it through Supporting Element Metal — study, credentialing, and steady institutional standing; the 50s onward carry it through Favorable Element Water itself — the chart's strongest, most self-defined stretch. Read this as "build now, launch biggest later," not "nothing is supported until later."

Near-term annual windows (within the current decade)

Individual years carry their own lean on top of the decade (from harish-report.md's 10-Year Forecast, regenerated 2026-09-26; each year is read from both its stem and its branch):

- 2026-2027 (Bing O, Jeong Mi): Caution years. Fire is this chart's unfavorable element, and it arrives as Authority (Direct Officer (Authority) / Seven Killings (Authority)) — pressure from authority rather than opportunity. 2027 is the tighter of the two: Jeong Seven Killings (Authority) presses the Day Master directly, Chuk Mi clash strikes the hour-branch root, and

Jeong Im combination ties up the natal Im. Accept formal duties, avoid confrontations with superiors (the chart's rebellion-against-authority theme), and do not make a leap here.

- 2028 (Mu Shin): Prepare. Mu Direct Resource supports, and Shin (Metal, Supporting Element) returns the year-branch root — with contractual friction (Sa Shin combination + punishment + break, Shin Hae Hae (Pig)), so read agreements carefully.
- 2029 (Gi Yu): The strongest single year of the decade. Gi Indirect Resource + Yu Strong / Earning, and the annual Yu completes the Sa Yu Chuk Metal three-harmony with the natal chart (already completed by the decade). If a structured move — a new institutional role, a public-facing credential, or a first independent client relationship — is planned before the 50s, 2029 (age 37) is the cleanest window, with 2028 as the preparation year.
- 2030–2031 (Gyeong Sul, Sin Hae): Mixed-supportive. Metal (Supporting Element) years, but 2030 carries Eul Gyeong combination (wealth star tied up) and Chuk Sul punishment, and 2031 lands Hae Hae self-punishment, Sa Hae clash and Shin Hae Hae (Pig) on the spouse palace — a year of change at home. Supportive for steady work; not the year for loose partnerships.
- 2032–2033 (Im Ja, Gye Chuk): Favorable (Favorable Element Water) years. 2032 completes the Hae Ja Chuk Water Directional Harmony — strong for creative and expressive output, though a large Hurting Officer (Output) year also sharpens friction with authority; 2033 (Gye Eating God (Output)) is gentler. The decade changes around Dec 2032.
- 2034–2035 (Gap In, Eul Myo): Wood (Wealth) years — income and negotiation themes, but both are Void years for this chart (In Myo are void for the Sin Hae day pillar), and 2034 also completes the In Sa Shin three-punishment. Keep contracts written and conservative.

Practical takeaway: avoid a leap in 2026–27; prepare in 2028 and move in 2029; 2032–33 is the next supportive window. If the transition can wait, the age-50 mark (~2042) opens the chart's longest and most self-defined favorable run, with the 60s and 70s continuing to support it.

Employment vs. Entrepreneurship — Synthesis

Combining the ten-god weight (Authority thinnest, Resource/Output strongest) with the timing picture above: this chart is not built for either pure lifelong employment or an immediate high-burn venture. The best-supported arc is sequential, not simultaneous — institutional or firm-based employment through the 30s and 40s (using the thin-but-real Authority and this era's Metal-Supporting Element support for credibility-building), transitioning to independent or advisory practice once the 50s Water decade opens and the output-feeds-wealth track record is established. Full independence earlier than that is not chart-contraindicated, but the chart's structural tailwind for it strengthens materially a decade or two out.

2026-09-26 — Corrections after the engine audit

The base report was regenerated after the 2026-09-25 engine audit (docs/audits/2026-09-25-engine-audit-verification.md) and the independent validation of this chart. Changes carried into this file:

- Element balance: the Chuk hidden-stem order was swapped in the engine (Gi/Sin/Gye is correct); Metal (27.8%) now leads Water (25.3%).
- Annual timing: Fire (Unfavorable Element) years 2026–27 now read as caution years, and 2029 — where the Sa Yu Chuk three-harmony completes — as the strongest year of the decade. The earlier "2030–2033 cleanest window" rested on stem-only leans and missed the three-harmony, Eul Gyeong combination, Chuk Sul punishment and Void signals.

- 40-49 decade: Eul Gyeong combination and Chuk Sul punishment added.
